Carrot Cage Design

This cage arrangement utilizes pipe cut to 8' 10" for its height, 6' for its width, and 12' for its length. The pipe-frame units are placed into the ground approximately 10" deep, which makes the above ground height of the cages approximately 8'. A fitted screen goes over the top of the entire unit and is secured to the ground by burying approximately 1' of screen material. Screen measurements (which make allowances for the Kee-Clamp hardware) are shown in this isometric view.

Screens are 20x20 amber mesh fabric.
