

✓ Selections have level of resistance to pea aphid similar to Lahontan.

---W. R. Kehr, Nebraska Progress report to NC-7, 1960

907505

✓ One or more seedling were resistant to both the pea and spotted aphids.

---W. R. Kehr, Nebraska Progress Report to NC-7, 1960.

907506

Along with several other lines was used in an intercross to incorporate the types of resistance they are supposed to carry into the progeny. This intercross was made to develop a multi-resistant line of alfalfa. Has pea aphid and spotted alfalfa aphid resistance. See summary card.

---North Carolina report, 1971 minutes of S-9 Technical Committee meeting, pg NC-2.

907507

Moderately resistant to Verticillium wilt in France. See summary card.

---Pierre Gayraud, report attached to correspondence dated 1/6/78.
