

## 20001 to 20229—Continued.

## 20093. SOPHORA JAPONICA.

Japanese pagoda tree.

From Liaoyang, Manchuria. "(No. 368a, June 4, 1906.) A much smaller variety of *Sophora* than is generally seen, growing as a shrub or a small tree with smaller leaves, branches, pods, etc.; quite ornamental and well worth growing. Only a few trees seen in a yard near Liaoyang." (*Meyer.*)

## 20094. COLUTEA SP.

From Port Arthur, Manchuria. "(No. 369a, May 14, 1906.) Probably *Colutea fruticosa*. Used in the parks in Port Arthur as an ornamental shrub. As the climate there is very dry, the shrubs and trees from there will thrive in semiarid regions." (*Meyer.*)

## 20095. AMORPHIA SP.

From Port Arthur, Manchuria. (No. 370a, May 14, 1906.)

## 20096. (Undetermined.)

From Port Arthur, Manchuria. "(No. 371a, May 14, 1906.) A shrub of bushy habit, with slender branches and lanceolate leaves, growing in the parks of Port Arthur along the sidewalks; well adapted for this purpose." (*Meyer.*)

## 20097. XANTHOXYLUM AILANTHOIDES.

From Port Arthur, Manchuria. "(No. 372a, May 14, 1906.) A small ornamental tree growing in the parks in Port Arthur." (*Meyer.*)

## 20098. ELAEAGNUS SP.

From Port Arthur, Manchuria. "(No. 373a, May 15, 1906.) An *Elaeagnus* with silvery leaves and bearing white berries; grows to be a tall shrub with long branches. Quite beautiful when seen in clumps." (*Meyer.*)

## 20099. ELAEAGNUS SP.

From Port Arthur, Manchuria. "(No. 374a, May 15, 1906.) A variety with black seeds; grows to be somewhat larger than the preceding one; otherwise the same remarks apply to it." (*Meyer.*)

## 20100. TILIA MANDSHURICA.

Linden.

From near Mukden, Manchuria. "(No. 375a, May 29, 1906.) A very large leaved linden from the forest around the Imperial East Tomb, near Mukden. A handsome tree, of which the leaves sometimes reach the size of 1 foot across in each direction." (*Meyer.*)

## 20101. ARALIA SP.

From A-teuk-ryong, northern Korea. "(No. 376a, Aug. 10, 1906.) A low ornamental shrub, with handsome, large, light green leaves and bearing large clusters of scarlet berries. Grows in shady places in the primeval forests; seems to prefer leaf mold." (*Meyer.*)

## 20102. ARALIA SP.

From Tchong-ping, northern Korea. "(No. 377a, Aug. 19, 1906.) A shrubby *Aralia* growing from 5 to 10 feet tall, with palmately divided leaves and bearing an abundance of black berries in umbels." (*Meyer.*)

## 20103. ARALIA MANDSHURICA.

From Possiet, Siberia. "(No. 378a, Sept. 10, 1906.) A very large leaved *Aralia*, the leaves sometimes becoming 3 to 4 feet long. Seems to be very hardy and drought resistant." (*Meyer.*)
