

**132398. HAWORTHIA CHALWINI** Marl. and Berg.

A haworthia with densely imbricated, thick, ovate-deltoid tuberculate leaves about 1 inch long. Allied to *Haworthia reinwardii*. Native to South Africa.

**132399. HAWORTHIA CHLOROCANTHA** Haw.**132400. HAWORTHIA CONFUSA** v. Poelln.

A stemless haworthia with a rosette about 2 inches across, of many lanceolate, erect or suberect leaves edged with toothlike bristles, and the tips with bright spots. Native to South Africa.

**132401. HAWORTHIA CUSPIDATA** Haw.

Stemless, with a rosette about 2 inches across of 20 to 30 obovate, lanceolate leaves about 1 inch long, the transparent tips having 3 to 5 long dark-green lines. Native to South Africa.

**132402. HAWORTHIA CYMBIFORMIS** var. **OBTUSA** (Haw.) Baker.

A smaller variety with darker leaves not more than 1 inch long.

**132403. HAWORTHIA DENTICULATA** Haw.

Stemless, with a rosette 3 to 4 inches across, of 20 to 30 dense, oblong-lanceolate leaves which are pale green, colorless at the tip and denticulate at the margins.

**132404. HAWORTHIA ELYAE** v. Poelln.

Proliferous, with an erect stem about 8 inches high, numerous green lanceolate leaves 2 inches long, and whitish tubercles.

**132405. HAWORTHIA FASCIATA** (Willd.) Haw.

A succulent, native to South Africa, with a short leafy stem forming a spiral rosette of ascending deltoid-lanceolate leaves having transverse bands of white tubercles. The rosy-lined flowers are in a terminal raceme less than 1 foot high.

For previous introduction see 78212.

**132406. HAWORTHIA FASCIATA** var. **CAESPITOSA** Berger.

A tufted variety with leaves about 2½ inches long; said to be a natural hybrid, *Haworthia fasciata* × *attenuata*.

**132407. HAWORTHIA FASCIATA** f. **SPARSA** v. Poelln.

A form distinguished by its conspicuous and solitary tubercles arranged in more or less prominent vertical rows.

**132408. HAWORTHIA FASCIATA** f. **MAJOR** (Salm-Dyck) v. Poelln.

A form with leaves 2 to 3 inches long.

**132409. HAWORTHIA FASCIATA** f. **OVATO-LANCEOLATA** v. Poelln.

A form with ovate-lanceolate leaves.

**132410. HAWORTHIA FASCIATA** f. **SUBCONFLUENS** v. Poelln.

A form with the upper leaf surface rather smooth and tubercles somewhat confluent on the lower surface.

**132411. HAWORTHIA FASCIATA** f. **VANSTAADENSIS** v. Poelln.

A form with leaves sometimes smooth or with few tubercles on the lower surface.

**132412. HAWORTHIA FASCIATA** f. **VARIABILIS** v. Poelln.**132413. HAWORTHIA GIGAS** v. Poelln.

Stemless, with a rosette of about 4 inches across of many self-colored, lanceolate leaves, 2 inches or more long, having very long end bristles and marginal teeth. Native to South Africa.
