

132414. *HAWORTHIA GLAUCA* Baker.

Elongate-stemmed, with oblong-lanceolate leaves about 1 inch long. The self-colored light or gray-green leaves have 5 to 7 lines on the back. Allied to *Haworthia coarctata*. Native to South Africa.

132415. *HAWORTHIA GRACILIS* v. Poelln.

Stemless, with a rosette about 2½ inches across, of many somewhat shining, narrow-oblong to narrow-obovate-oblong leaves about 1½ inches long. The leaves have 3 to 5 green lines on the upper side and bristles on the margin.

132416. *HAWORTHIA HAAGEANA* v. Poelln.

A haworthia with numerous bright-green, ovate-lanceolate leaves about 1½ inches long and half as broad. Related to *Haworthia reticulata*.

132417. *HAWORTHIA HAAGEANA* var. *SUBRETICULATA* v. Poelln.

A variety with the lines on the upper leaf surface slightly anastomosing.

132418. *HAWORTHIA HELMAE* v. Poelln.

Proliferous, with numerous, ovate-oblong or oblanceolate acuminate leaves less than ½ inch long. The leaf margin and tip have transparent bristles.

132419. *HAWORTHIA HERREI* v. Poelln.

A haworthia branching from the base and with a stem up to 4 inches long. The lanceolate, triangular, gray-green leaves, up to 2 inches long, are acuminate with a short mucro and have greenish tubercles. Native to South Africa.

132420. *HAWORTHIA HERREI* var. *DEPAUPERATA* v. Poelln.

A variety with 1 to 5 longitudinal lines and few tubercles on the lower leaf surface.

132421. *HAWORTHIA JONESIAE* v. Poelln.

A species with a stem becoming 8 inches or taller and numerous crowded, dark-green, lanceolate, erect, incurved leaves up to 1 inch long. Related to *Haworthia glauca*.

132422. *HAWORTHIA LAETEVIRENS* Haw.

A haworthia with a rosette of numerous oblanceolate-oblong, pale-green leaves up to 1½ inches long, tipped with a pellucid awn, and denticulate on the margins and keel.

132423. *HAWORTHIA LATEGANAE* v. Poelln.

Stem about 2 inches high, leaves numerous, spirally arranged, ovate-lanceolate, 2 to 2½ inches long, having a very sharp mucro. Native to Cape Province, South Africa.

132424. *HAWORTHIA LIMIFOLIA* Marl.

Stemless, with a dense rosette of ovate-lanceolate leaves having 15 to 20 filelike ridges on the leaf surface and a raceme of greenish flowers. Native to South Africa.

132425. *HAWORTHIA LONGIANA* v. Poelln.

Stemless and proliferous, with 10 to 15 ovoid-deltoid green leaves 5 to 10 inches long. The leaf surface is concave to flat convex, with minute, concolorous tubercles on the raised middle line; the convex back is covered with rather small, greenish-white tubercles.

132426. *HAWORTHIA SETATA* var. *XIPHIOPHYLLA* (Baker) v. Poelln.

A variety with leaves about 2 inches long not including the pellucid awn. Received as *Haworthia longiaristata*, now referred to the above.

132427. *HAWORTHIA MARAISII* v. Poelln.

Stemless, with a dense rosette of few (many in cultivation), brownish-green leaves with a triangular, pellucid face, often grooved in the middle, and with numerous obtuse tubercles.
