

132938. HAWORTHIA INTEGVA v. Poelln.

A stemless haworthia with a dense rosette of many small leaves. Allied to *Haworthia reticulata*. Native to South Africa.

132939. HAWORTHIA MARGARITIFERA var. ERECTA (Haw.) Baker.

A variety with the leaves smaller and the tubercles smaller and more crowded than in the type.

132940. HAWORTHIA MINIMA Baker.

A stemless haworthia with a small dense rosette of self-colored lanceolate leaves about $\frac{1}{2}$ inch long with bristles at margins and ends. Native to South Africa.

132941. HAWORTHIA NOTABILIS v. Poelln.

A haworthia with a rosette of numerous, erect, dark-green lanceolate leaves $1\frac{1}{2}$ to 2 inches long.

132942. HAWORTHIA PALLIDA Haw.

A haworthia with a dense rosette, 2 to 3 inches across, of ascending, lanceolate, pale-green leaves, the upper third of leaf with vertical lines of darker green, the tip with a pellucid awn, and margin with ciliate teeth.

132943. HAWORTHIA PAYNEII v. Poelln.

A stemless haworthia with a rosette about 2 inches across of many gray-green, lanceolate leaves, toothed on the upper half. The scape bears about 12 white flowers. Native to South Africa.

132944. HAWORTHIA PEARSONI C. H. Wright.

A stemless haworthia with a dense rosette of about 80 oblanceolate oblong, translucent leaves 1 inch long, the margins with flattened deltoid teeth. The pale flesh-colored flowers are in a lax raceme. Allied to *Haworthia translucens*.

132945. HAWORTHIA TRANSLUCENS Haw.

A succulent with a rosette of lanceolate, ascending, pale-green leaves, 2 inches long, having a long transparent awn at the tip and margined with deltoid, transparent teeth. Native to South Africa. Received as *Haworthia pelluscens* Haw.

132946. HAWORTHIA PICTA v. Poelln.

A stemless haworthia with few leaves (many in cultivation) in a dense rosette about 3 inches across. The ovate-oblong, green leaves are over 1 inch long, the upper part rectangularly recurved, the triangular face almost flat, pellucid, with numerous shiny tubercles and minute whitish flecks. A remarkable member of the Retusae group.

132947. HAWORTHIA PILIFERA Baker.

A haworthia with a rosette 2 inches in diameter of 20 to 30 fleshy oblong leaves, the tips transparent and bristle-toothed at margins, and a raceme 1 foot high of greenish-white flowers. Native to South Africa.

132948. HAWORTHIA PLANIFOLIA Haw.

A haworthia with a rosette 2 to 4 inches across, ovate or oblanceolate, obtuse leaves $1\frac{1}{2}$ to 2 inches long, almost entire or with few bristles. Closely related to *Haworthia cymbiformis*.

132949. HAWORTHIA PLANIFOLIA var. SETULIFERA v. Poelln.

A variety with straight or somewhat curved terminal bristles $\frac{1}{8}$ inch long. The oblong-obovate leaves are about 2 inches long and smooth on the edges and keel.

132950. HAWORTHIA PLANIFOLIA var. SUBLAEVIS v. Poelln.

A variety with oblong-lanceolate or ovate-lanceolate leaves $1\frac{1}{2}$ inches long with terminal bristles $\frac{1}{10}$ to $\frac{1}{8}$ inch long.
