

132951. HAWORTHIA PYGMAEA v. Poelln.

A haworthia with a rosette up to 2 inches across of 7 to 12 thick, subcordate-triangular, rigid leaves about 1 inch long. The leaves are blunt, without bristles. Resembles *Haworthia asperula*.

132952. HAWORTHIA RECURVA Haw.

A haworthia with a rosette, 2 to 3 inches across, of 12 to 15 deltoid, much recurved, rigid leaves up to 1½ inches long; nearly flat on the face, pale green with vertical lines of darker green, rounded on the back, keeled upwards, dark green and scabrous with small crowded tubercles.

132953. HAWORTHIA RETICULATA Haw.

A caespitose haworthia with smooth, light-green leaves, finely denticulate, ¾ to 1 inch long, acute with about 10 connected nerves. The inflorescence is 1 foot high and the flowers are rosy lined.

132954. HAWORTHIA RETICULATA var. ACUMINATA v. Poelln.

A variety varying from the type in its long acuminate leaves.

132955. HAWORTHIA RETICULATA Haw.

Received under the varietal name "commaeta," for which a place of publication has not been found.

132956. HAWORTHIA RETUSA (L.) Haw.

A haworthia with a rosette 2 to 3 inches across of 10 to 15 deltoid, recurved, smooth, pale-green leaves, 1 to 1½ inches long and marked on the upper half of the face with pale vertical lines.

132957. HAWORTHIA RETUSA var. MUTICA (Haw.) Baker.

A variety with leaves not cuspidate at the tip.

132958. HAWORTHIA RUGOSA (Salm-Dyck) Baker.

A species with a rosette, 5 to 6 inches across, of numerous crowded, lanceolate-deltoid, acuminate, green leaves 3 to 4 inches long. The leaf face is flat, the back rounded, keeled upwards and scabrous over both faces with whitish tubercles.

132959. HAWORTHIA RYDERIANA v. Poelln.

A stemless haworthia with a rosette 1½ to 2½ inches across of many dark or brownish-green, obovate, deltoid, acuminate leaves about 1½ inches long with minute teeth on the margins. Native to Cape Colony, South Africa.

132960. HAWORTHIA SCABRA Haw.

A haworthia with a rosette 2 inches in diameter of about 10 ovate, ascending, dull-green leaves 1½ to 2 inches long and rough with crowded tubercles. The leaf face is flat or slightly concave and the back rounded with the tip keeled.

132961. HAWORTHIA SCHMIDTIANA v. Poelln.

A species up to 16 inches high, with broad, ovate-lanceolate recurved-tipped leaves 1 inch long, arranged in 3 slightly spiral rows. The young leaves are very dark green and the warty tubercles glistening; the older leaves become duller in color. Related to *Haworthia viscosa*.

132962. HAWORTHIA SCHMIDTIANA var. ANGUSTATA v. Poelln.**132963. HAWORTHIA SCHMIDTIANA var. SUBERECTA v. Poelln.****132964. HAWORTHIA SCHULTIANA v. Poelln.**

A stemless haworthia with rigid, erect, green or reddish-green, oblong-lanceolate leaves 1½ inches long. Related to *Haworthia retusa*.

132965. HAWORTHIA SCHULTIANA var. MINOR Triebn. and v. Poelln.

A variety with small leaves.

132966. HAWORTHIA SCHULTIANA var. ROBERTSONENSIS v. Poelln.

A variety with leaves erect and more numerous than the type.
