

142492. ARUNDINARIA SIMONI (Carr.) A. & C. Riviere. Poaceae.**Bamboo.**

From Florida. Plants presented by Mrs. W. G. Peckham, St. Cloud, through Julian Nally, Gotha. Numbered November 21, 1941.

This bamboo, a native of China, grows in this more vigorous form to 25 feet or more high in rich and reasonably moist soils. The leaves are narrower than those of metake (*Pseudosasa japonica*) and sometimes are quite slender. The culms are characterized by nonprominent nodes and moderately thick walls. They are reported to make exceptionally strong and durable fishing poles, besides being well suited to other uses.
