From archipelago of Chiloé. " Wild sorts annually resow their seeds, producing, by nature's care alone, limitless thousands of undomesticated tubers of every color and form, all of which are delicious eating. Among the islands there are new and distinct strains, whose tubers and plants have no similarity to known varieties. I gathered one. It had a snow-white skin with small, bright crimson eyes which were shaded with dark crimson. The flesh was sweet as sugar. The plant was upright, thick, and waxlike; the leaves were like a three-leafed clover; no one would have taken it for a potato plant. This, as well as many other kinds of wild potatoes, matures in the spring month of October, equivalent to May in the United States. All endure hard frosts, but the ground is never frozen. They remain in the wet about five months during the continuous rains of a Chilean winter, and seem to like it. In this collection there are many potatoes having a like form and appearance; they
