

23041 to 23199—Continued.**23104 to 23114**—Continued.

than those of the interior. To me, they are not unlike the Chilotes. However, I have tested so many kinds lately that they all taste alike for the moment. Some of these are extra early; none very late. In this province their names are from the Mapocho Indian dialect. The following are wild varieties which have become permanent strains by long cultivation." (*Husbands.*)

- 23104. Large, round, deep-eyed, yellowish white tubers.
- 23105. Small, round, somewhat uneven, white tubers.
- 23106. Medium-sized, round, somewhat uneven, yellow tubers.
- 23107. Very long, rather uneven, cylindrical, pinkish yellow tubers.
- 23108. Small, oblong, white tubers.
- 23109. Medium-sized, dumb-bell shaped, violet-colored tubers.
- 23110. Medium-sized, round, uneven, yellow tubers.
- 23111. Medium-sized, round, uneven, white and violet tubers.
- 23112. Large, oblong, violet-colored tubers.
- 23113. Medium-sized, oblong, white tubers.
- 23114. Long, curved, cylindrical, numerous-eyed tubers.

23115 to 23120.

From the interior of the province of Valdivia. "Potatoes grown in the interior of the province of Valdivia have no especial peculiarities to describe except that they are of extra good form and very productive. While said to be of less flavor and merit than those of the coast, I believe that they are equal in quality, but have different flavors. In the entire south of Chile, including Chiloé, potatoes having red, yellow, or white skins with yellow flesh are the sweetest; boiled, baked, or fried, they are delicious. The names are Mapocho. The following are wild varieties which have become established classes by long cultivation." (*Husbands.*)

- 23115. Large, smooth, oblong, white tubers.
- 23116. Medium-sized, oblong, white tubers.
- 23117. Medium-sized, pink-colored tubers.
- 23118. Compound, medium-sized, light violet colored tubers.
- 23119. Large and small, oblong, flattened, smooth, white tubers.
- 23120. Medium-sized, round, somewhat flattened, smooth, yellow tubers.

23121 to 23134.

From the province of Valdivia, both coastwise and from the interior. "In wild varieties of potatoes the black predominate, nearly all of which mature in the springtime. There are many kinds formed and new ones constantly being created by self-sown seeds. Like all wild Chile potatoes they are extra-fine eating. If planted they increase in size for 4 or 5 consecutive years, at which time they reach perfection of size and fixed flavors, and may be considered as standard classes of potatoes. The following are still different wild, uncultivated varieties." (*Husbands.*)

- 23121. Very small, round, purple tubers.
- 23122. Small, round, white tubers.
