

**413719. ECHINOCHLOA TURNERIANA (Domin) J. M. Black**  
Poaceae.

From Australia. Seed presented by Genetics Resources Section, Commonwealth Scientific and Industrial Research Organization, Canberra. Received October 27, 1976.

'Channel Millet'. Lake Dartmouth, 100 km west northwest of Charleville, Queensland. Harvested August 1975.

**413720 to 413726. LYCOPERSICON ESCULENTUM Mill.**  
Solanaceae. **Tomato.**

From Netherlands. Seed presented by A. G. de Ruyter, Deruyter Zonen B. V., Bleiswijk through Regional Plant Introduction Station, Ames, Iowa. Received September 6, 1976.

**413720.** 'Beauty'. Resistant to *Cladosporium* races A and B.

**413721.** 'Cantate'. Resistant to *Cladosporium* races A and B.

**413722.** 'Fortos V.F.'. *Fusarium* and *Verticillium* resistant. Resistant to *Cladosporium* races A and B.

**413723.** 'Fuga'. Resistant to *Cladosporium* races A and B.

**413724.** 'Happy'. Resistant to *Cladosporium* races A and B.

**413725.** 'Rondo'. Resistant to *Cladosporium* races A and B.

**413726.** 'Stacos V.F.'. *Fusarium* and *Verticillium* resistant. Resistant to *Cladosporium* races A and B.

**413727. CAMELLIA sp. Theaceae.**

From People's Republic of China. Seed collected by Yu Chen Ting, Department of Biology, Boston College, Chestnut Hill, Massachusetts. Received August 2, 1976.

Kwelin, Kwangsi. Many flowers. Yellow.

**413728 to 413732. PRUNUS (hybrid) Rosaceae.**

From France. Rooted cuttings presented April 1973, by M. J. Baffert, Marseille. Rootstocks originally distributed by Institute National de la Recherches Agronomique, Angers. Numbered August 23, 1976.

**413728.** GF 8-1. Selection from 'Marianna' (*P. cerasifera* × ?). Extremely vigorous. Compatible with all plums and some apricots. Adapted to all soil types. Propagated from cuttings.

**413729.** GF 31. Hybrid Myrobalan (*P. cerasifera*) × Japanese Plum (*P. salicina*). Vigor good, but less than P.I. 413728. Compatible with all apricots. Strong rooting. Good for dry and rocky soils. Propagated by cuttings.

**413730.** GF 655-2. Seedling of 'St. Julien' (*P. insititia*). Excellent compatibility with peach. Resistant to bacterial canker. Grows well in soils high in phosphorus and at pH 7.5 to 8. Comes true from seed.

**413731.** GF 677. *P. amygdalus* × *P. persica*. Compatible with peach. Superior to peach seedlings in heavy wet soil. Also good in dry, alkaline soils. Disease resistant. Easily propagated from cuttings.

**413732.** 'St. Julien Hybrid No. 1'. 'St. Julien d'Orleans' (*P. insititia*) × 'Common Mussel' (*P. domestica*). More compatible with peach than 'St. Julien'. Semidwarfing. Performs well in heavy soils. Comes true from seed.

**413733. PRUNUS ARMENIACA L. Rosaceae. Apricot.**

From France. Cutting presented by R. Bernhard, Institut National de la Recherche Agronomique, Domaine de la Grande Ferrade, Gironde, Pont-de-la-Maye. Received August 11, 1975.

'Moniqué'.
