

Inventory 32, Seeds and Plants Imported.

PLATE II.

BRANCH OF A SEEDLING CHINESE JUJUBE (*ZIZIPHUS JUJUBA* MILLER) WHICH HAS FRUITED IN TEXAS. NATURAL SIZE. (S. P. I. No. 22683.)

Seeds of the "Bottle jujube" were distributed in 1907. This fruit, from one of these seedlings, sent by Mr. F. T. Ramsey, of Austin, Tex., is the largest fruited variety yet in bearing in this country. The flesh is coarse, the skin tough, and the quality only fair. See S. P. I. 34162 for the description of a different variety. (Office photograph No. 10109, August 13, 1912.)
