

34523 to 34601—Continued.

34564. *EVODIA VELUTINA* Rehder and Wilson.

“(Wilson No. 994.) Tree, 13 meters tall; woods, 1,600 meters altitude; west of and near Wenchwan Hsien, western Szechwan.”

34565. *JUGLANS* sp.

Walnut.

“(Wilson No. 390.) (Cf. *J. regia*.) Tree, 10 to 15 meters tall; cultivated; Fang Hsien; 1,500 to 2,000 meters altitude. A good-flavored walnut.”

34566. *CORNUS* sp.

“(Wilson No. 1017.) Tree, 10 to 16 meters altitude; fruit blue-black; woodlands, 1,200 to 1,500 meters altitude; west of and near Wenchwan Hsien, western Szechwan.”

34567. *PYRUS* sp.

“(Wilson No. 395.) Tree, 6 meters tall; flowers white; fruit small, globose, flattened; woodlands and open country, 600 to 1,300 meters altitude: north and south of Ichang; common.”

34568. *EUPTELEA PLEIOSPERMA* Hook. and Thoms.

(*E. davidiana* Baill.)

“(Wilson No. 588.) Hsingshan Hsing.”

“An extremely interesting tree belonging to the Trochodendraceæ, widely distributed in central and western China, where specimens have been obtained by many travelers, the first by Peré David, after whom it is named. The plant forms a shrub or small tree 10 to 20 feet in height with neat nearly orbicular leaves terminated by a thick mucrolike apex, and colors well in autumn; the wood resembles that of the hazel. The species is very variable, there being a great many different forms.” (*Veitch, Hortus Veitchii*.)

34569. *CELTIS* sp.

“(Wilson No. 593.) Tree, 6 meters tall, fruit black; woods, Fang Hsien; 1,300 meters altitude.”

34570. *LONICERA SIMILIS DELAVAYI* (Franch.) Rehder.

“From western China. It seems more natural to treat *L. delavayi* only as a glabrous or glabrescent variety of *L. similis*.”

34571. *PRUNUS CYCLAMINA* Koehne.

“From Changyang Hsien, western Hupeh, in woodlands, at an altitude of 100 to 1,300 meters, April and June, 1907. A tree from 5 to 8 meters in height bearing red fruit, the calyxes resembling the corollas of the cyclamen in shape.”

34573. *PHELODENDRON SACHALINENSE* Sargent.

“(Wilson No. 4217.) Small tree, 6 to 10 meters tall; woodlands, 1,600 to 2,000 meters altitude; Mupin, western Szechwan.”

34574. *PRUNUS TENUIFLORA* Koehne.

“(Wilson No. 13.) From Hsingshan Hsien, western Hupeh, in woods, at an altitude of 1,300 to 1,600 meters, May and June, 1907. This species is very similar to *P. sargentii* Rehder, but differs in the smaller and apparently paler and thinner leaves, the frequent presence of pubescence on the petiole, in the peduncle (4 to 20 millimeters long), the occasional pubescence of the pedicels, the very slender cupule (6.5 to 10 millimeters long, in *P. sargentii* 5.5 to 7 millimeters long) and the smaller and broader stone (6 to 8 millimeters long, in *P. sargentii* 9 to 10 millimeters long); also very similar to *P. conradinae*.”
