

**35673 to 35676.**

From San Jose, Costa Rica. Presented by Sr. Otón Jiménez L., chief, Department of Botany, Museo Nacional. Received July 7, 1913.

**35673.** *ACHRADELPHA MAMMOSA* (L.) O. F. Cook. **Sapote.**  
(*Lucuma mammosa* Gaertn. f.)

"From San Francisco de Guadalupe. A sapote 10 centimeters in diameter, with pulp of golden-red color, very sweet taste, and not very glutinous. It is very much esteemed and brings good prices in the market." (*Jiménez L.*)

**35674.** *ACHRADELPHA VIRIDIS* (Pittier) O. F. Cook. **Sapote.**

A tree related to the sapote, but producing fruit of superior quality. It was described originally as *Calocarpum viride* Pittier. A larger quantity of seed of this species was secured afterward from Guatemala by Mr. O. F. Cook, who refers to this tree as *Achradelpha viridis* (S. P. I. Nos. 38478 to 38481, 38566, and 40906). The reason for changing the name is stated by Mr. Cook as follows:

"The injerto is undoubtedly a close relative of the true sapote of Mexico and Central America, which is the type of the genus *Achradelpha*. The generic name *Calocarpum* used by Pierre and other recent writers for the sapote is not considered available on account of its previous application to other plants."

"From Guanacaste. The fruit reaches about 10 centimeters in diameter. The pulp is dark red and of fine flavor. This variety is rare and one of the most valuable." (*Jiménez L.*)

**35675.** *PERSEA AMERICANA* Miller. **Avocado.**  
(*Persea gratissima* Gaertn. f.)

"From San Mateo. The fruit reaches 30 centimeters in length and 10 centimeters in width at its largest part. It is one of the largest varieties of Costa Rica. It is of delicious flavor and is called butter avocado (*Aguacate de mantequilla*)."

**35676.** *PERSEA AMERICANA* Miller. **Avocado.**  
(*Persea gratissima* Gaertn. f.)

"From San Mateo. The fruit is ovoid, and about 10 to 12 centimeters in both diameters. Much esteemed."

**35677 to 35684. STIZOLOBIUM spp.**

Presented by Mr. D. Hooper, Office of Economic Botanist, Botanical Survey of India Department, Calcutta, through Mr. C. V. Piper, of the Bureau of Plant Industry. Received July 2, 1913.

Quoted notes by Mr. Hooper.

**35677.** *STIZOLOBIUM* sp.

"(Reg. No. 34979.) From Hajipur subdivision, Mozufferpur, Behar; locally called *Kabach*."

**35678.** *STIZOLOBIUM CINEREUM* Piper and Tracy.

"(Reg. No. 35055.) From Kessaria, Chumparun, Behar; locally called *Kabach*."

**35679.** *STIZOLOBIUM* sp.

"(Reg. No. 35085.) From Mozufferpur, Behar; locally known as *Kabach*. These shiny beadlike black seeds are probably *S. capitatum*."

**35680.** *STIZOLOBIUM* sp.

"(Reg. No. 35096.) From Cuttack, Orissa; locally called *Byle*. This also appears to resemble *S. capitatum*."
