

**36018 to 36037—Continued.**

- 36033.** "*Naspati*. Oblate and somewhat oblique in form, slightly flattened at both base and apex. Nak a slight point, situated one-half inch above apex. Weight about 10 ounces. Skin smooth, greenish yellow in color, and of good flavor. The variety ripens late and is a good keeper."
- 36034.** "*Sufaida No. 1*. Oval to elliptical in form, the left shoulder prominent, right shoulder falling. Apex broadly pointed and slightly beaked. Weight 1 pound and 4 ounces. Skin smooth, yellowish green in color. Flesh yellow, slightly fibrous around seed, firm and meaty, and of good flavor. Late in ripening and keeps well."
- 36035.** "*Kachamitha*. A small, ovate fruit, of about 5 ounces in weight. Left shoulder slightly higher than the right; apex rather sharply pointed. Skin smooth, greenish yellow, tinged with red on the cheek. Flesh deep yellow in color, juicy and sweet in flavor. Can be eaten even when unripe. A prolific bearer, ripening early in the season. Keeps well."
- 36036.** "*Chapta*. Ovate in form, stem inserted slightly to right side of base. Apex broadly pointed. Weight about 14 ounces. Skin smooth, light green in color. Flesh deep yellow, juicy, and of excellent flavor. Proportion of flesh to seed is unusually large."
- 36037.** "*Faizan*. Elongated in form, and of medium size. Skin yellowish green in color. A good keeper and of excellent flavor. Ripens in midseason."

**36038 and 36039. MANGIFERA INDICA L.****Mango.**

From Mozufferpur, Behar, India. Procured by Mr. Wilson Popenoe, of the Bureau of Plant Industry.

Quoted notes by Mr. Popenoe.

"Mozufferpur produces some of the best mangos in India, and is said to possess some exceptionally choice varieties. These varieties were obtained from a Hindu nurseryman and werestated to be choice, but no description was furnished with them. Mozufferpur has a much heavier rainfall than Seharunpur, and for this reason it was thought desirable to obtain mangos from here, in the hope that they might be better adapted to the climate of south Florida than other Indian varieties."

**36038.** "Inarched tree labeled E."      **36039.** "Inarched tree labeled K."

**36040 to 36045.**

From Seharunpur, India. Received from the Government Botanical Gardens, through Mr. Wilson Popenoe, of the Bureau of Plant Industry, May 7, 1913.

Plants of the following; quoted notes by Mr. Popenoe:

**36040 and 36041. VITIS VINIFERA L.****Grape.**

**36040.** "*Bedana* grape, small variety. A seedless grape of excellent flavor, which is supposed to have come to Seharunpur from some point in the Punjab, and originally to have come from Afghanistan. It is perhaps too small to be of great value in America, but at Seharunpur it is highly esteemed as a table variety."

**36041.** "*Husseini* grape. A variety from Kabul, Afghanistan, of large size and excellent quality, but probably not superior to a number of varieties already growing in California."
