

**36283 to 36484.**

Collected by Mr. W. F. Wight, of the Bureau of Plant Industry. Received July 7, 1913.

Quoted notes by Mr. Wight, except as otherwise indicated.

**36283.** *ABRUS PRAECATORIUS* L.

**Jequirity.**

“(No. 310. Arequipa, Peru.) *Guarero*. Seeds obtained from an Indian medicine woman, from whom no reliable information could be obtained. They probably came from a lower altitude, but even if from the mountain region they can be grown only in the most favored localities of Florida and California.”

**36284 and 36285.** *AGROSTIS* spp.

“From Tiahuanaco, Bolivia. Grass from the plateau near Tiahuanaco. It forms tufts and is rather wiry when old. It is doubtful whether even the llama will eat it except when it is young. The native grasses of this region appear to have little value, but they may be of botanical interest.”

**36284.** “(No. 681.)”

**36285.** “(No. 683.)”

**36286.** *ALLIUM CEPA* L.

**Onion.**

“(No. 292.) Seeds obtained from an Indian woman in Arequipa, Peru. There seems to be practically no seed trade, as a business, in Peru, and these seeds may show some interesting variations.”

**36287.** *AMARANTHUS* sp.

“(No. 595.) Seeds obtained from an Indian medicine woman in Oruro, Bolivia.”

**36288 to 36293.** *ANNONA CHERIMOLA* Miller.

**Cherimoya.**

**36288.** “(No. 341. Cuzco, Peru.) This fruit is very abundant in the market at Cuzco and of excellent quality. Probably none are grown within one or two days' journey from the city, and they are often brought from valleys at four or five days' distance.”

**36289.** “(No. 591. Oruro, Bolivia.) Some of the very finest cherimoyas seen in South America were in the market at Oruro. They came from the vicinity of Cochabamba.”

**36290.** “(No. 650. From Peru.) A cherimoya with surface slightly roughened.”

**36291.** “(No. 651.) Rough surface, the usual type in Peru, but still of excellent quality.”

**36292.** “(No. 649. Peru.) This fruit had a practically smooth surface and by many is considered superior to those with the rough surface.”

**36293.** “(No. 660. Arequipa, Peru.) An excellent specimen.”

**36294.** *ANNONA MURICATA* L.

**Soursop.**

“(No. 652. Lima, Peru.) *Guanábana* or *custard-apple*. This is usually a larger fruit than the cherimoya and of softer texture. Quite common in the market at Lima and perhaps at other places in some seasons.”

**36295.** *APIUM* sp.

“(No. 293. Arequipa, Peru.) Seeds obtained from an Indian woman in Arequipa.”

See S. P. I. No. 36286 for further note.
