

39261—Continued.

"*Grosella*. Grows on a tree 13 feet high and 4 or 5 inches in diameter, the branches beginning about 6 feet from the ground. The fruit grows from the branches direct, in small clusters, entirely separated from the leaf branch. The berry is prized very highly for jams and jellies." (*Goding.*)

For illustrations of the habit, fruit, and foliage of this tree as grown in Florida, see Plates IX and X.

39262. SACCHARUM OFFICINARUM × CILIARE. Poaceæ.

Sugar cane.

From Cienfuegos, Cuba. Presented by Mr. Robert M. Grey, superintendent, Harvard Botanical Station.

"Cuttings of a hybrid cane, the result of a cross between our field sugar cane *Saccharum officinarum* L. ♀ and *Saccharum ciliare* ♂ (S. P. I. No. 17991.) In carrying on my hand hybridizing work (1909) among the canes I found *S. ciliare* in flower and used the pollen on one of my seedling varieties of *S. officinarum*, which resulted in the present cross. To be sure, it has no commercial value, as it contains but little sugar, but it may be of interest to know that the species will cross-fertilize." (*Grey.*)

39263. ALLIUM CEPA L. Liliaceæ.

Onion.

From Valencia, Spain. Presented by Mr. Claude I. Dawson, American consul. Received September 19, 1914.

39264 to 39286.

From Buitenzorg, Java. Presented by Mr. T. E. Van der Stok, Chief of the Station for Selection of Annual Crops, Botanic Garden. Received September 8, 1914. Quoted notes by Mr. Van der Stok.

39264 to 39282. HOLCUS SORGHUM L. Poaceæ.

Sorghum.

(*Sorghum vulgare* Pers.)

"Generally growing in the mountains on a very small scale."
