

## 42597 to 42605—Continued.

## 42602. HAKEA LAURINA R. Br. Proteaceæ.

A tall shrub up to 30 feet in this country and becoming treelike in Australia. Leaves elliptical or lanceolate, 5 to 6 inches long. Flowers crimson in a globular head  $1\frac{1}{2}$  to 2 inches thick, from which the numerous showy golden-yellow styles project 1 inch or so in every direction. It is the only species with showy flowers grown in America. Equally satisfactory for shrubbery and for hedges. Always highly ornamental. It has been called "the glory of the gardens of the Riviera." (Adapted from *Bailey, Standard Cyclopedia of Horticulture, vol. 3, p. 1428.*)

## 42603. HAKEA SUAVEOLENS R. Br. Proteaceæ.

A rounded shrub from 8 to 15 feet high, leaves 2 to 4 inches long, cylindrical, with rigid spinelike tip, occasionally entire, but usually branched into rigid cylindrical lobes. Flowers white, fragrant. An easily grown, drought-resistant, self-protective plant, and therefore a favorite for depot grounds, public parks, impenetrable hedges, and the like. Makes a suitable covering for dry hillsides, although not deep rooted and sometimes inclined to become top-heavy. (Adapted from *Bailey, Standard Cyclopedia of Horticulture, vol. 3, p. 1428.*)

## 42604. HAKEA VARIA R. Br. Proteaceæ.

A shrub resembling *Hakea suaveolens*, with some leaves with nearly cylindrical lobes, varying, however, to flat and hollylike, 1 to 2 inches long. Flowers in small clusters. (Adapted from *Bailey, Standard Cyclopedia of Horticulture, vol. 3, p. 1428.*)

42605. ALECTRYON TOMENTOSUM (F. Muell.) Radlk. Sapindaceæ.  
(*Nephelium tomentosum* F. Muell.)

A tree 20 to 30 feet high, from Queensland and New South Wales. Leaflets four to eight, 2 to 4 inches long; flowers small, crowded on short, slightly branched tomentose panicles sometimes reduced to simple racemes. Fruit softly tomentose-villous, depressed at the top, of two or rarely three globular, slightly compressed lobes, united at the top, four or five lines in diameter, rather hard, indehiscent. Seeds half immersed in a yellowish arillus. (Adapted from *Bentham, Flora Australiensis, vol. 1, p. 466.*)

For previous introduction, see S. P. I. No. 35102.

## 42606. CITRUS LIMONIA Osbeck. Rutaceæ. Szechwan lemon.

From Chungking, China. Seeds presented by Mr. E. Widler. Received April 15, 1916.

"This lemon answers almost the description of the Ichang lemon, excepting that its seeds are much smaller, and the inside seems to be all pith. These Szechwan lemons grow about 100 miles distant from Chungking. Chinese name *Hsiang yüan.*" (*Widler.*)

## 42607. ARALIA CACHEMIRICA Decaisne. Araliaceæ.

From Jamaica Plain, Mass. Presented by Prof. C. S. Sargent, Arnold Arboretum. Received April 28, 1916.

A spineless herb from the Himalayas growing to a height of 8 feet, with quinately compound leaves, the pinnæ often with five to nine leaflets which are
