

43124 to 43187—Continued.

43138. "*Weeping*. These are most showy and decorative trees to plant, being ornamental as well as useful. The pendulous habit makes them very conspicuous when planted on a lawn or drive. If the ground is well manured and cultivated around them, they will produce great crops of fruit of splendid quality. These are worked on standard stocks, ranging in height from 5 feet to 6 feet 6 inches."

43139 to 43146.⁵ *AMYGDALUS PERSICA NECTARINA* Ait. Amygdalaceae.

Nectarine.

43139. "*Anseene*. The parent of *Goldmine*. The fruit is of the largest size and of very light color; flesh tender, melting, and of most delicious flavor; tree extremely hardy and a regular cropper."

43140. "*Diamond Jubilee*. This new nectarine is very large in size, larger than any except *Zcalandia*; bright red in the sun, dull red in the shade; flavor exquisite, flesh greenish white, melting, and very sweet; a prodigious bearer. Young transplanted trees in the nursery rows were carrying fruit, and the branches of the older trees were bending down with the weight of fruit. The points in this nectarine are its heavy cropping, large size, and delicious flavor."

43141. "*Goldmine*. The fruit is of enormous size. It is a perfect freestone, the pit being extremely small for so large a fruit. The fruit is a beautiful cream color, tender, juicy, melting, sugary, and of most delicious flavor; color bright bronzy red; season of ripening, second week of February; a very heavy cropper."

43142. "*Lippiatt's Late Orange*."

43143. "*Muir's Seedling*. A new seedling of the *Goldmine* type, resembling that variety in size and color, but ripening when *Goldmine* is all finished, thus prolonging the season and an acquisition on that account."

43144. "*New Boy*. Fruit of large size and extremely handsome, covered all over with brilliant crimson; flesh white, juicy, sugary, and of exquisite flavor; tree very hardy and a profuse cropper; one of the best."

43145. "*Radium*. A new nectarine of large size, orange shaped, highly colored, very sweet; ripens just after *Goldmine*. It is quite free from that objectionable point which all the large nectarines possess; therefore, for packing, *Radium* comes first."

43146. "*Surecrop*. A seedling of my own raising, which resembles *Goldmine* in size and appearance, but is a much heavier cropper. It has never failed to carry a full crop. I have every confidence in recommending this grand new nectarine."

43147. *CITRUS SINENSIS* (L.) Osbeck. Rutaceae.

Orange.

"*Best Seedless*."⁵ A new local seedling of great merit and, as its name indicates, perfectly seedless; in quality one of the finest we have ever sampled and sure to become a great favorite; the most vigorous of all oranges."

⁵ See footnote, p. 9.
