

The Feijoa from Paraguay has been a successful introduction and has established itself in thousands of our gardens. Possibly the "Nyandú-aphisá" (*Britoa sellowiana*, No. 46024), a fruiting shrub from the same region, may be equally successful.

The common habit of budding all species of East Indian mangos upon seedlings of the common turpentine mango may prove to be inadvisable. It is possible even that the relatives of the mango, such as *Mangifera longipes* (No. 46022) from Malakka, may have value for stock purposes.

If *Sabinea carinalis* (No. 46026) has not been already tested in California it should be, according to Mr. Jones, of the island of Dominica, for it has showy scarlet flowers and is particularly suited to the dry, hot hillsides which abound in California. How much frost it will stand is yet in question.

The botanical determinations of seeds introduced have been made and the nomenclature determined by Mr. H. C. Skeels, while the descriptive and botanical notes have been arranged by Mr. G. P. Van Eseltine, who has had general supervision of this inventory. The manuscript has been prepared by Miss Esther A. Celander.

DAVID FAIRCHILD,
Agricultural Explorer in Charge.
