

A FIELD OF GENGE CLOVER IN EASTERN CHINA. (ASTRAGALUS SINICUS L., S. P. I. No. 45995.)

This clover is extensively grown in China as a manure crop on the low rice fields. The whole crop is plowed under in early summer, immediately before the planting of the rice. It is also used as human food. (Photographed by F. N. Meyer, Mokanshan, Chekiang, China, April 4, 1908; P5437FS.)
