"No. 21. Not native in Marajo. I found this kind growing in plant pots and plant boxes which contained fruit trees brought from the city of Para. Even in Para itself this species is not native and I have never found it on any of my collecting trips."

47023. *ERAGROSTIS GLOMERATA* (Walt.) L. H. Dewey.

"No. 1. A kind of native rice, growing on not inundated soil in Marajo. It is an interesting kind for several reasons. In the first place, it is the tallest I ever heard of, growing sometimes to a height of 8 feet. In the second place, it is a perennial kind, growing in large isolated bunches for several years, flowering and bearing seeds the whole year round. Its leaves are very broad. The kernels may not have any industrial or culinary value, but as a cattle feed the green plant might be useful. Besides this, I consider this kind interesting from a phytogeographical standpoint, demonstrating that real native kinds of rice are to be found in the Amazonian region."

47030. *PANICUM AQUATICUM* Poir.

"No. 20."

47031. *PANICUM MAXIMUM* Jacq.

"No. 24. A guinea grass of gigantic growth, completely different from the common one we have here. The common guinea grass has narrow leaves and reaches to a height of about 4 feet. This kind is stronger and much taller, having a very broad leaf and reaching a height of 7 or more feet. It is not a native grass of this country, but was introduced from Jamaica in soil which was packed around banana suckers, growing among the banana trees and especially where the suckers had been laid down before planting."

47032. *PANICUM MAXIMUM* Jacq.

"No. 25. The common guinea grass; introduced, not native."
