

## 49745 to 49796—Continued.

49795. (Undetermined.)

“(No. 320a. El Barranquillo. February 26, 1920.) *Palo gíote*. Seeds of a tree up to 40 feet high which produces in January an abundance of small white flowers.”

49796. MYROXYLON ELLIPTICUM (Clos) Kuntze. Flacourtiaceæ.

(*Xylosma ellipticum* Hemsl.)

“(No. 301a. Antigua. February 17, 1920. Herb. No. 943.) Seeds of a thorny red-berried shrub from the mountainside between Antigua and Santa Maria de Jesus. It looks as though it would make a good hedge plant, the leaves being 2 to 3 inches long, of pleasing appearance, and the thorns quite formidable. When in fruit, the red berries, which are about the size of cranberries or coffee berries, but of a lighter color than the former, add greatly to the attractiveness of the plant. Its ultimate height is about 15 feet.”
