

A SMALL FRUITED CHINESE HAW TREE.

The small fruited haws of China (*Crataegus pinnatifida*) are more acid than the large varieties and they are an excellent substitute for cranberries. The American missionaries throughout this Province use them as such. They could be grown for that purpose in the United States so that everyone could have his cranberry tree in his yard. Photo. No. 5332 by F. N. Meyer, taken August 23, 1907, at Cheesan, Shantung, China.
