

new series, Vol. 1, p. 39, 1915.) 42980. *R. jackii* Rehder. "This beautiful rose was introduced into the Arboretum from Korea several years ago by Mr. Jack, and when it flowered was named for him. At about the same time it was named in England *R. bakeri* and *R. kelleri*, names which cannot be used for it, however, as they had previously been given to other roses. It is one of the *Multi-florae* roses with long stems which lie flat on the ground, lustrous foliage, and pure white flowers two inches or more in diameter, in wide, many-flowered clusters. The flowers are larger than those of the Japanese *R. multiflora* and it blooms much later than that species. This rose is perfectly hardy and a first-rate garden plant. The hybridizer ought to be able to find it in a good subject from which to raise a race of hardy, late-flowering Rambler roses. (Arnold Arboretum, Bulletin of Popular Information, new series, Vol. 1, p. 43, 1915.) 42981. *R. multiflora cathayensis* Rehder & Wilson. "It is a hardy, vigorous, and handsome plant with the habit of the Japanese *R. multiflora*. The flowers are from two to two and a half inches in diameter and are produced in large, many-flowered clusters, and the large, conspicuous, bright yellow anthers add to the beauty of the clear pink petals. This rose may well become a popular garden plant. It offers possibilities which the hybridist will undoubtedly take advantage of; and it is of considerable historical interest as the wild original of garden plants cultivated probably for centuries by the Chinese and known in Europe and America for more than a hundred years." (Arnold Arboretum, Bulletin of Popular Information, new series, Vol. 1, p. 35, 1915.) 42982. *R. sweginzowii* Koehne. A rose from western Szechuan, with deep rose colored flowers, growing to a height of 5 meters, at altitudes of 2,300 to 3,600 meters. The shoots are thickly covered with short, stout, flattened prickles. (Adapted from *Plantae Wilsonianae*, Vol. 2, p. 324, 1915.)

*Rymandra excelsa* Salisbury. (Proteaceae.) 42850. Seeds from Avondale, Auckland, New Zealand. Presented by Mr. H. R. Wright. "New Zealand honeysuckle tree, the wood of which is used for veneering purposes, in making furniture. Very pretty in the grain. Its flowers are pretty and at the same time odd, coming out of the side of the branches, instead of out of the terminals as in most cases. A pretty tree and a useful timber for furniture." (Wright.)
