

Citrus webberii (Rutaceae), 46733. **Calpi**. From Philippine Islands. Seeds presented by Mr. P. J. Wester, Agricultural Advisor, Department of Mindanao and Sulu. "A shrubby tree with small, sharp spines. It has oblong-ovate, shining, dark green leaves and white, solitary, sweet-scented flowers. The oblate fruits, 2 inches long by $2\frac{1}{2}$ inches wide, are lemon-yellow and have a thin skin, often loose like a Mandarin orange. The flesh is whitish to grayish, very juicy and aromatic, with less rag perhaps than any other citrus fruits ever examined by the writer. The trees have a long flowering season, as fruits are offered in Manila throughout the summer to late autumn." (Wester.)

Corynocarpus laevigata (Corynocarpaceae), 46764. **Karaka**. From Honolulu, Hawaii. Presented by Mr. C. S. Judd, Superintendent of Forestry, Board of Commissioners of Agriculture and Forestry. "Seeds of the **karaka** tree of New Zealand. This tree was introduced into these islands in 1878 when Mr. Francis Sinclair sent the seed of it from Auckland to Mrs. Valdemar Knudsen, who planted it at Halemanu, Kauai, Hawaii, at an elevation of 3,500 feet above sea level. The tree has thriven, and forms a dense forest cover. It is considered a valuable addition to our list of water-conservation forest trees. The tree is not very long-lived but perpetuates itself by abundant reproduction. The wood is soft and the foliage is relished by stock." (Judd.)

Crotalaria sp. (Fabaceae), 46735. From Philippine Islands. Seeds presented by Mr. P. J. Wester, Agricultural Advisor, Department of Mindanao and Sulu. "An annual plant up to 75 cm. ($2\frac{1}{2}$ ft.) tall, with curious, rather attractive sepals that remain for many weeks. An interesting subject for a plant breeder of ornamentals. Native of Mindanao at an altitude of 400 to 700 m. (1,300 to 2,300 ft.)" (Wester.)

Cucumis melo (Cucurbitaceae), 46726. **Muskmelon**. Grown at the Plant Introduction Field Station, Chico, California. "Seeds of an Armenian melon. It is a good bearer and the fruits weigh from 15 to 20 pounds. The skin is rough and greenish yellow in color. The flesh is white, solid and firm, and very sweet. No doubt it would make a good keeper for late use." (R. L. Beagles.)

Cucumis melo (Cucurbitaceae), 46728. **Muskmelon**. From Peking, China. Presented by Dr. Yamei Kin, who secured them from Mr. H. L. Yang, Peking University.
