

2.

- CICER ARIETINUM.** 27513. From Batoum, Caucasus, Russia. The chickpea is much eaten here by the natives and the Russians. It is generally boiled in soups or served with meat stews; also roasted and sugared, and eaten as a sweetmeat. (Meyer's introduction.)
- CITRUS SP.** 27496. Seedless white pomelo from Kingston, Jamaica. Presented by Mr. Aston W. Gardner, Manager of the Tangley Fruit Company. For distribution later.
- CORYLUS MAXIMA.** 27344. From near Souchoum Kale, Caucasus. A filbert, native of the Caucasus. Much grown for its fine, oblong nuts which find a ready sale. **CORYLUS AVELLANA.** 27345-348. Four varieties of hazelnuts from near Souchoum Kale, Caucasus. Adapted to the Gulf region and Southeastern States. No. 27346 is a very large nut and the most widely grown variety in the Caucasus. (Meyer's introductions.)
- DIOSPYROS TESSELARIA.** 27494. From Reduit, Mauritius. Presented by Dr. B. Boname. "A tree or shrub with alternate, oval or ovate, glabrous leaves. Flowers densely clustered, sessile, arising from lateral nodules on the young branches. The fruit is edible and is globular or ellipsoidal in form. The wood is valuable." (Hiern in Trans. Camb. Philos. Soc., vol. 12.) For distribution later.
- DIOSPYROS SP.** 27512. From Batoum, Caucasus, Russia. A wild persimmon growing all through the Crimea and the Caucasus, where the countries border the Black Sea. The small black fruits are called 'Churma', and are sold everywhere to the native population as sweetmeats. The Russians in the Caucasus use this persimmon as a stock for D. KAKI, but claim that the grafting or budding is rather difficult. As it is extremely drought and heat resistant, it is highly recommended as a stock for large-fruited persimmons in regions where the winters are mild and the summers dry and hot. The trees are ornamental; the fruits are too small to be considered by white races as a dessert. (Meyer's introduction.)
- GLEDITSIA SPP.** 27516-17. From Livadia, Crimea, Russia. 27516. A honey locust growing to be a tall tree, found along roads and in thickets. A good shade tree for semi-arid sections. 27517. Seed collected from a tall tree in the Botanical Garden at Nikita. (Meyer's introductions.)
