

*Passiflora ligularis.*

"One of the best of the passion vine fruits. The fruit is about the size of an egg, with a parchment-like skin, containing a sweet acidulous pulp surrounding the seeds. It grows on a vine which clings by tendrils, and is cultivated on verandas and arbors, producing fruit in a few months after planting. The fruit is used in making sherbets and refreshing drinks.

"It is recommended for tropical and sub-tropical regions, and for greenhouse culture." (W. E. Safford.)
