93748. STEVIA REBAUDIANA Bertonl.
Asteraceae.

From Cuba. Cuttings presented by Robert M. Grey, Harvard Botanic Garden, Soledad, Cienfuegos. Received June 30, 1931.

Ka-á he-é (sweet herb). A herbaceous perennial 20 inches high with small leaves

93748—Continued.

about an inch long which are said to be 200 times as sweet as cane sugar. It is native to Paraguay, where it grows wild in the highlands. The sweet taste is due to a glucoside, which is said to be safe for diabetics.

For previous introduction see 54677.
