

132800. *HETEROPOGON CONTORTUS* (L.) Beauv. Poaceae.

An excellent forage grass which is perennial and produces seed readily. It is the dominant grass of the Ati Plains, Kenya Colony, Africa.

For previous introduction see 51226.

132801. *INDIGOFERA ENDECAPHYLLA* Jacq. Fabaceae.

Indigo.

An annual or biennial prostrate legume 2 to 3 feet long, with 7 to 9 oblong leaflets and dense racemes of violet-purple flowers. It is used as a cover crop. Native to tropical Africa.

For previous introduction see 77296.

132802. *INDIGOFERA HIRSUTA* L.

Indigo.

An annual 3 feet high with crimson flowers. Used as a cover crop.

For previous introduction see 107803.

132803. *ISCHAEMUM LAXUM* R. Br. Poaceae.

Grass.

A perennial grass, native to tropical Asia and Australia.

132804. *LEUCAENA GLAUCA* (L.) Benth. Mimosaceae.

For previous introduction see 110884.

132805. *LOTUS CORNICULATUS* L. Fabaceae.

Birdsfoot trefoil.

A low-growing legume with yellow flowers.

For previous introduction see 111582.

132806. *MELNIS MINUTIFLORA* Beauv. Poaceae.

Molasses grass.

For previous introduction see 118389.

132807. *MICROLAENA STIPOIDES* (Labill.) R. Br. Poaceae. Meadow ricegrass.

A slender perennial grass, plentiful in lowland districts in Australia and New Zealand, chiefly near the sea. It is a valuable lawn and pasture grass.

For previous introduction see 49019.

132808 to 132810. *PENNISETUM* spp. Poaceae.

Grass.

132808. *PENNISETUM COMPLANATUM* (Nees) Hemsl.

A grass native to Guatemala, with slender wiry stems up to 6 feet high, narrow succulent leaves, and a foxtail seed head 5 to 6 inches long. It grows well on dry land, but is much more succulent during the wet season.

For previous introduction see 49763.

132809. *PENNISETUM PURPUREUM* Schumach.

Napier grass.

A grass native to Northern Rhodesia where it grows on river banks in alluvial soil.

For previous introduction see 89626.

132810. *PENNISETUM SETOSUM* (Swartz) L. Rich.

A grass cultivated for forage.

For previous introduction see 117956.

132811. *STYLOSANTHES GULANENSIS* (Aubl.) Swartz. Fabaceae.

A branching herbaceous perennial about 3 feet high, with rusty hirsute stems, trifoliate leaves of lanceolate, sharp-pointed leaflets, and globose heads of small fragrant yellow flowers, subtended by leafy bracts. It is native to Guiana and Brazil where it is grown as forage.

For previous introduction see 89214.

132812. *STYLOSANTHES MUCRONATA* Willd.

A much-branched undershrub 1 to 2 feet high, native to southeastern Asia and tropical Africa, with rigidly coriaceous trifoliate leaves. Of value as a forage crop.

For previous introduction see 103836.
