

132981. *HAWORTHIA TRIEBNERIANA* var. *SUBTUBERCULATA* v. Poelln.

A species with leaves smaller than those of the type, dark green and with many tubercles on the lower surface.

132982. *HAWORTHIA TRUNCATA* Schönl.

Received as "forma *crassa*," a form in which the truncate apex of the leaves is about $\frac{1}{2}$ inch thick.

132983. *HAWORTHIA TUBERCULATA* v. Poelln.

A haworthia with a rosette of numerous falcate, deltoid-lanceolate leaves up to 3 inches long. The leaves are erect spreading or incurved, brownish green, never shining, and covered with glossy-tipped tubercles. Related to *Haworthia rugosa*.

132984. *HAWORTHIA TUBERCULATA* var. *SUBEXPANSA* v. Poelln.

A variety always stemless and with leaves less numerous and more spreading than the type.

132985. *HAWORTHIA TURGIDA* Haw.

A haworthia with a rosette 2 to $2\frac{1}{2}$ inches across of 20 to 30 short oblong-acute, recurving leaves that are smooth, very turgid, and marked on the upper half of the face with 5 to 7 vertical lines.

132986. *HAWORTHIA UMBRATICOLA* v. Poelln.

A proliferous haworthia with numerous pale-green, shining pellucid, obovate to oblong leaves about $1\frac{1}{2}$ inches long. Related to *Haworthia reticulata*.

132987. *HAWORTHIA UNICOLOR* v. Poelln.

A stemless haworthia with numerous, ovate-lanceolate, bright-green, bristle-tipped leaves.

132988. *HAWORTHIA VARIEGATA* L. Bolus.

A stemless haworthia with a rosette of 20 to 30 linear-lanceolate leaves about 2 inches long. The ciliated leaves have small pale flecks. Allied to *Haworthia angustifolia*. Native to South Africa.

132989. *HAWORTHIA VENOSA* (Lam.) Haw.132990. *HAWORTHIA VISCOSA* var. *CONCINNA* (Haw.) Baker.

A variety with leaves longer and more recurved than the type.

132991. *HAWORTHIA VISCOSA* var. *INDURATA* (Haw.) Baker.

A variety differing from the type in the fewer leaves, which are thicker, longer, and less concave on the face.

132992. *HAWORTHIA VISCOSA* var. *PSEUDOTORTUOSA* (Salm-Dyck) Baker.

A variety with rows of leaves twisted spirally.

132993. *HAWORTHIA VISCOSA* var. *TORQUATA* (Haw.) Baker.

A variety with longer, ovate-lanceolate leaves than the type which are spirally arranged.

132994. *HAWORTHIA VISCOSA* (L.) Haw.

Variety *Typica*. A haworthia with a leafy stem $\frac{1}{2}$ to 1 foot long and trifarious, ascending ovate leaves about 1 inch long. The dull-green leaves are sometimes viscous. Native to South Africa.

132995. *HAWORTHIA WHITESLOANEANA* v. Poelln.

A stemless species with few obovate, oblong, green leaves about $1\frac{1}{2}$ inches long, the face truncated at the tip, and the back with pellucid, solitary, roundish low tubercles. Related to *Haworthia retusa*.

132996. *HAWORTHIA WOOLLEYII* v. Poelln.

A stemless proliferous haworthia with rosettes $2\frac{1}{2}$ to 4 inches across, of many opaque, ovate-lanceolate leaves about $2\frac{1}{2}$ inches long. The face is
