

65702 to 65704—Continued.

65702. *Aoki Wata.* 65704. *Shiso Wata.*65703. *Cha Wata.*65705. *DIOSCOREA ALATA* L. Dioscoreaceae. **Greater yam.**

From Tongatabu, Tonga Islands. Tubers presented by C. E. Wood, Director of Agriculture, Government of Tonga, at the request of H. A. Cowan, British consul. Received November 7, 1925.

Tubers of a yellow-fleshed yam, introduced for trial in the Gulf States.

65706 and 65707.

From Haiti. Seeds obtained through O. F. Cook, Bureau of Plant Industry. Received December 16, 1925.

65706. *CRYPTOSTEGIA* sp. Asclepiadaceae.

A tropical climber, with opposite leaves and large, showy reddish flowers. Introduced from Gonaives for testing as a source of rubber.

65707. *HEVEA BRASILIENSIS* (H. B. K.) Muell. Arg. Euphorbiaceae.

From Bayeux. The "Para" rubber tree, native to Brazil, and now extensively cultivated in the East Indies, has always ranked as the principal and most important rubber-producing tree in the world.

For previous introduction, see No. 64542.
